

1 Wrapping Latex Environments

The following is a demonstration of a custom L^AT_EX command with a couple of parameters.

This is verbatim, alltt, text.

Setting escape to False ensures that text in the environment is not subject to escaping...

Setting content_separator ensures that line endings are broken in the latex just as they are in the input text.
alltt supports math: $x^2 = 10$

This is back to normal text...
